

Mind the AI Divide: Shaping a Global Perspective on the Future of Work

UN and ILO joint report on the risks of uneven AI adoption

Description

This report focuses on disparities in access to digital infrastructure, quality education, training, and skills that shape opportunities in the changing world of work.

By identifying barriers that limit inclusive participation in AI-driven labour markets, the report emphasises the need for targeted strategies to support skills development, equitable access to opportunities, and decent work. Such policies would highly benefit young people seeking to enter or remain in the labour market.
